

Assignment 2 – Part B Research Paper Presentation

11376/8890 – Computer Vision and Image Analysis (CVIA)

Context

The purpose of this assignment is for students to gain experience in research-led education. To this end, each student is required to choose one paper, from a list of carefully selected suitable computer vision and image analysis research papers available on the unit's UC Learn site (see last topic block), and to familiarise themselves with the topic suitably to give a 10min presentation on the paper and topic, explaining the technique or method described in the paper in suitable details.

Find a Suitable Paper

- A list of carefully selected papers are available on [*Canvas -> Modules -> Research Paper Reading*](#) or [*Canvas -> Pages -> Research Paper Reading \(2026\)*](#)
- You may find a suitable research paper on your own (for example, from the [Computer Vision Foundation](#) or [IEEEExplore](#) via the [Library](#) website).

Presentation

- You need to prepare a presentation using Powerpoint, Keynote or similarly suitable presentation software to present the core idea(s) of the paper.
- Consider the audience as your fellow students, not the lecturer!
- This presentation should be 10min (+/- 1min is acceptable).
- It should cover the main aspects of the paper:
 - What method or algorithm is presented in this paper?
 - What problem does it solve?
 - How does it relate to previous work?
 - How has the method or algorithm been tested?
 - What were the results?
- The shortness of the available time will most likely not allow you to go into the nitty-gritty technical details. Keep it at a high level so that your peers can easily understand what this paper is all about, where it can be used and what its pros and cons are. You want to focus on the big picture, rather than getting lost in low-level details.
- Do not read out the paper! Use your own words on your own slides to explain what is described in the paper. Make the contents easily accessible to others! Most likely that means that you will need to read some further material, be it from the textbook or from the referenced papers.
- If you use any material from other sources, for example the WWW, you must reference these. Do not grab a presentation on the topic from the WWW and present it as your own. Prepare your own slides and present the research in your own words.
- Feel free to include your own views about the paper. What did or didn't you like about it? What alternatives can you think of?

Submission

- You need to upload your **Presentation (video)**, **Slides**, and the **Paper** selected.

Marking Guide

35 marks for this assignment:

- How well has the student demonstrated an understanding of the topic of the paper? (*10 marks*)
- How clear was the presentation (both slides and verbal)? (*5 marks*)
- Was it pitched at the right level so that the audience could easily grasp the overall concept(s) of the topic presented in the paper? (*5 marks*)
- Did the student use their own words to describe the paper's content(s)? Did the student speak freely? (*5 marks*)
- Was the presentation well structured? (*5 marks*)
- Did the presentation adhere to the time limit? (+/- 1min is acceptable) (*5 marks*)
